

CONVEYING TECHNOLOGY

AVERMANN conveying technology comprises a great variety of belt systems, as, for example,

- chain conveyors
- roller belt conveyors
- sliding belt conveyors
- sorting belts and picking belts

Chain conveyor with horizontal baler

Sliding belt conveyor

Chain conveyor

AVERMANN belts are specified and manufactured individually according to the respective application. These belts are produced in modular design by efficient laser-cutting machines and are therefore

length-adjustable or extendable at any time. By using high-grade belts (i.e. oil and grease resistant) bulky goods can be transported safely.

Chain conveyor and sliding belt conveyor

Sorting belt in a sorting cabin

Sorting plant for recyclable materials

CONVEYING TECHNOLOGY

Conveying systems with shifting technology

Sliding belt conveyor with special hopper

Filter cake conveying machine with shifting platform for an optimum feed of the trough
