MOBILE-PACK-BIN

The pendulum blade guarantees cleanliness without the accumulation of refuse deposits on the outside. The MOBIL-PACK-BIN can be continuously filled because the blade passes under the waste that has been thrown in on its return cycle, pushing it into the bin on its forward cycle. Optimum compaction is achieved while the operating noise generated by the MOBILE-PACK-BIN is extremely low. Years of experience and constant improvement has resulted in the combination of the most economical net weight with great strength. The MOBILE-PACK-BIN is equipped with a robust hydraulic unit.

The cover of the aggregate room can be fold down and provides a secure platform for making maintenance work.
